

Strategy Pattern

Strategy Pattern (ContextV1)

Client, Proxy, RealSubject 모두 한 인터페이스를 바라본다.

Proxy Pattern (실제 Injection 관계)

Proxy Pattern (실제 Runtime 동적관계) – 구체 클래스만 있는 곳

상속받은 기능을 직접 사용하지 않고 다형성을 이용하기 위해서만 상속받는다. 실제 target은 Injection받아서 사용한다 (패턴을 맞춘다) Proxy Pattern (Runtime 의존관계) – 결론적으로 얘기하자면 아래와 같다.

Client, Target은 전혀 건들지않고 Proxy만 chain으로 계속 넣어서 꾸밀수 있다.
